Personal Profile

I am a hard-working and extremely self-motivated person who is always looking for ways to challenge myself and improve my abilities. I have great communication skills and a keen eye for detail and am happy working either in a group or independently. I am looking for a front-end developer position in a company that will help me to learn and grow whilst challenging me to step outside of my comfort zone. I believe that I will bring true value to any company.

Developer Skills and experience

I am competent in:

- Writing valid HTML5
- Creating responsive layouts for desktop and mobile applications using CSS
- Working with SCSS / BEM coding standards
- Writing valid ES7 JavaScript code
- Building functional web apps with React.js
- Using Redux to store and provide data
- Working with Google's Firebase database
- Command Line Interface
- Git and GitHub

I enjoy building front-end projects and user interfaces and have been working with React a lot lately. My recent projects are all viewable on my online portfolio. I feel that they are an accurate and honest representation of my capabilities in building a professional, responsive UI/UX. I plan to continue to push myself and improve my developer skills, in time crossing over to back-end and full-stack development.

Previous Employment

Self Employed Decorator

2007 – 2023

I have worked as a painter and decorator since 2007, running my own self-employed business from 2011 to December 2022.

I gained valuable skills and experience from this job, including:

- Administration and customer service.
- Adhering to strict deadlines.
- Maintaining a consistent quality of work throughout each project.
- Managing an open line of communication with clients.
- Providing detailed quotes and invoices.
- Maintaining an excellent reputation through reliability and a high-quality service.
